## KnpsnappyBundle

[Snappy](#) is a PHP (5.3+) wrapper for the [wkhtmltopdf](#) conversion utility. It allows you to generate either pdf or image files from your html documents, using the webkit engine.

The KnpsnappyBundle provides a simple integration for your Symfony project.

build passing

396 [KnxBundles.com](#)

## Installation

With [composer](#), add:

```
{
    "require": {
        "knplabs/knp-snappy-bundle": "~1.4"
    }
}
```

Then enable it in your kernel:

```
// app/AppKernel.php
public function registerBundles()
{
    $bundles = array(
        //...
        new Knp\Bundle\SnappyBundle\KnpSnappyBundle(),
        //...
    );
}
```

## Configuration

If you need to change the binaries, change the instance options or even disable one or both services, you can do it through the configuration.

```
# app/config/config.yml
knp_snappy:
  pdf:
    enabled: true
    binary: /usr/local/bin/wkhtmltopdf #"C:\\Program Files\\wkhtmltopdf\\bin\\wkhtmltopdf.exe\" for
r Windows users
    options: []
  image:
    enabled: true
    binary: /usr/local/bin/wkhtmltoimage #"C:\\Program Files\\wkhtmltopdf\\bin\\wkhtmltoimage.exe\"
" for Windows users
    options: []
```

If you want to change temporary folder which is `sys_get_temp_dir()` by default, you can use

```
# app/config/config.yml
knp_snappy:
  temporary_folder: %kernel.cache_dir%/snappy
```

## Usage

The bundle registers two services:

- the `knp_snappy.image` service allows you to generate images;
- the `knp_snappy.pdf` service allows you to generate pdf files.

### Generate an image from an URL

```
$container->get('knp_snappy.image')->generate('http://www.google.fr', '/path/to/the/image.jpg');
```

### Generate a pdf document from an URL

```
$container->get('knp_snappy.pdf')->generate('http://www.google.fr', '/path/to/the/file.pdf');
```

### Generate a pdf document from multiple URLs

```
$container->get('knp_snappy.pdf')->generate(array('http://www.google.fr', 'http://www.knplabs.com', 'http://www.google.com'), '/path/to/the/file.pdf');
```

### Generate a pdf document from a twig view

```
$this->get('knp_snappy.pdf')->generateFromHtml(  
    $this->renderView(  
        'MyBundle:Foo:bar.html.twig',  
        array(  
            'some' => $vars  
        )  
    ),  
    '/path/to/the/file.pdf'  
);
```

## Render an image as response from a controller

```
$html = $this->renderView('MyBundle:Foo:bar.html.twig', array(
    'some' => $vars
));

return new Response(
    $this->get('knpsnappy.image')->getOutputFromHtml($html),
    200,
    array(
        'Content-Type'          => 'image/jpg',
        'Content-Disposition'   => 'filename="image.jpg"'
    )
);
```

## Render a pdf document as response from a controller

```
$html = $this->renderView('MyBundle:Foo:bar.html.twig', array(
    'some' => $vars
));

return new Response(
    $this->get('knp_snappy.pdf')->getOutputFromHtml($html),
    200,
    array(
        'Content-Type'          => 'application/pdf',
        'Content-Disposition'   => 'attachment; filename="file.pdf"'
    )
);
```

## Render a pdf document with a relative url inside like css files

```
$pageUrl = $this->generateUrl('homepage', array(), true); // use absolute path!

return new Response(
    $this->get('knp_snappy.pdf')->getOutput($pageUrl),
    200,
    array(
        'Content-Type'          => 'application/pdf',
        'Content-Disposition'   => 'attachment; filename="file.pdf"'
    )
);
```
